

The SurelySafe mobile app allows users to enter their Covid-19 vaccine dates and vaccination cards, test results, and daily health screenings around Covid-19. Reminder notifications can be setup for daily or weekly use.

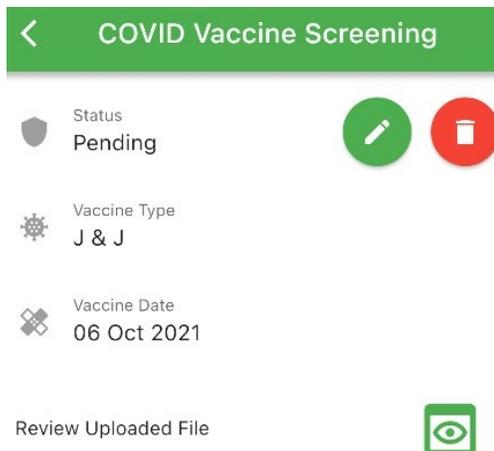

## Notification Settings

From the main screen, 3 lines in the upper left hand corner navigate to **Notification Settings**. Notifications allow pop-ups from SurelySafe on mobile devices as a reminder to login to the app. If your organization requires daily health screenings, it's suggested to setup up the reminder every day you are required to submit the screening. For required Covid-19 tests, a weekly reminder is suggested.

## Vaccination Entry

Enter your type of vaccine, date, and attachment or photo from your mobile device. Once entered, your Administration team will need to approve the information. The status will show as *“pending”* until that approval takes place. If your vaccination record is rejected, it's often due to a missing attachment or dates not matching the attached vaccine card. Please check the status of your vaccination record at least 1-2 days after entry to ensure it has been approved.

### Covid-19 Test Entry

Enter your Covid-19 test results and proof of test from your mobile device. Any positive result will automatically apply CDC recommended quarantine dates for you and your organization can review this from their admin portal. As quarantine dates vary by organization and vaccination status, please consult with your Administrators for return to work instructions.

**Test Results**

Lab Name  
CVS

Test Time  
2021/10/01 6:30 PM

Test Type

### Covid-19 Daily Screening

For many organizations, the daily health screening is optional. This can be used as a helpful guide to assess whether you should return to work if you have an exposure, were diagnosed with Covid-19, or are experiencing symptoms. Please complete the screening if you have any question about your ability to work while experiencing symptoms.

**Screening for Meg**

Do you have any of the following symptoms:

- Fever
- New Cough - Dry (for chronic allergic / asthmatic cough, a change from baseline)
- SOB (Shortness of Breath)
- Bluish lips / face
