SurelySafe

Population Health Innovations has been providing platforms that manage sensitive health data for over 15 years. We've hosted over 10 million electronic health records and developed SurelySafe to provide tracking of COVID-19 symptoms, cases, exposures, and the recording of vaccinations and tests.

SurelySafe automates all aspects of managing COVID-19 for Human Resources, Safety, and Compliance professionals. As employers struggle with the task of tracking thousands of employees' health records, SurelySafe enables them to easily record all data under one solution. This ensures compliance, protects worker's health, reduces liabilities, and safeguards employees' confidential records.

SurelySafe is designed to adapt with your evolving workforce. By providing us with an HRIS employee export, we can automatically match your internal systems with SurelySafe to ensure records are updated continuously with your workforce changes. Setup, training, and ongoing support are all included in our simple, monthly pricing.
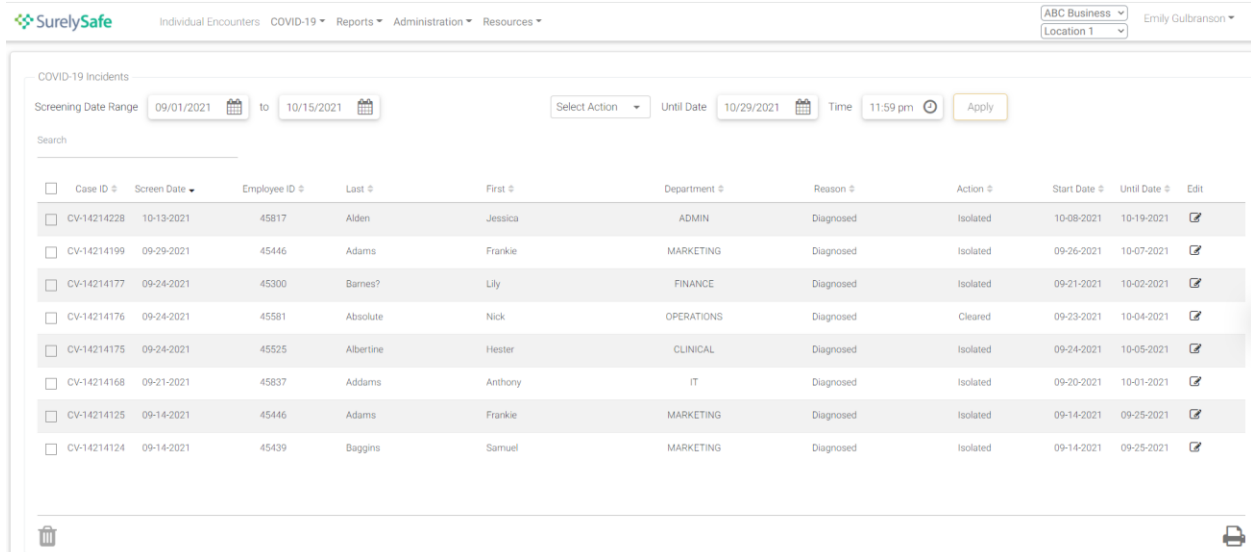

SurelySafe Admin Daily Log

SurelySafe allows Human Resources administrators to screen employees directly in the interface or by providing employees self-reporting links. Self-reporting links can be used online in any browser or by downloading the SurelySafe app on either iOS or Android mobile devices. Self-screening enables employees to "certify" their daily symptoms, COVID-19 exposures, test results, and vaccination status. Administrators can run a variety of reports on employees vaccinated/not vaccinated, tested/not tested, positive case tracking, and exposures, to name a few.

SurelySafe Contact Tracing

SurelySafe Contact Tracing automates positive case quarantine dates and possible exposures, with the ability to fully trace where a positive occurrence may have exposed others. Options to manually "clear" employees who later test negative exist so Human Resources can customize quarantine dates according to their company policy.

SurelySafe COVID-19 Testing

Human Resources and/or employees can submit COVID-19 testing dates and results. A negative test will "clear" them for entry to the workplace while a positive test automatically adjusts their status to "quarantine." In any positive case, the SurelySafe Contact Tracing module can be used to alert other employees who may have been exposed. If your company requires regular testing, employees can set weekly or daily notifications in the app as reminders to enter their test results. Administrators can easily track any overdue test for an employee.

SurelySafe Vaccination Recording

Human Resources or employees can record the dates and types of COVID-19 vaccine(s) they receive. Employees can take a photo of their vaccination card using the mobile app and administrators can submit this information from the SurelySafe administration interface. To ensure Human Resources has verified the information submitted, all self-reported vaccination entries will display in the "Vaccination Approval" module. Administrators can open the vaccination card photo, verify its accuracy, and mark an employee as "approved."

	Submit Date ▾	Employee ID ⇕	Last ⇕	First ⇕	Department ⇕	Vaccine Type ⇕	Vaccine Date ⇕	Status ⇕	⬇	Edit

SurelySafe Mobile App Using Self-reporting Links

Employees are each issued a secure, self-identifying link to use via a browser or within the SurelySafe app available for Android and iOS devices. The self-reporting app allows employees to enter their vaccination dates and cards, test results and documentation, along with daily COVID-19 screening for symptoms, diagnoses, or exposures. Any positive COVID-19 tests or diagnosis will alert the employee they are not "cleared" for in-person work and the data is viewable in the Contact Tracing module.

Vaccine Entry:

Daily Screening:

SurelySafe Vaccine Dashboard

SurelySafe provides Human Resources a comprehensive dashboard to view all vaccination records company-wide or by location in real-time. All data can be easily exported for detailed reporting on doses recorded, fully vaccinated statuses, and boosters received.

COVID-19 Dashboard

Vaccination Ratio

- Unvaccinated: 81.3%
- Vaccinated Dose 1: 1.4%
- Vaccinated Dose 2: 0.3%
- Vaccinated Booster: 2%
- Fully Vaccinated: 16.7%
- Exempted: 0.3%

SurelySafe Reporting

SurelySafe allows administrators to run a variety of reports around vaccinations, tests, exemptions, health screenings, exposures, and positive cases. Comprehensive reporting ensures companies can effectively manage COVID-19 liabilities within the workplace and monitor locations or departments where higher COVID-19 instances may occur.
